

Groom your classic car green

Gearheads are eco-pimping their vintage rides. Take this Southern Californian marketer and fetishist of muscle cars. Colette Brooks spent \$17K converting her 24-year-old white Cadillac El Dorado to biodiesel.

The L.A. Weekly quotes: "As euphoric as I feel behind the wheel of a biodiesel Cadillac, a 440-horsepower testosterone engine — well, that's just orgasmic. It's like a vegan taking a bite of steak." Now Brooks has launched [BioBling](#), a service to help you find a green ride and to dress it up with anything from a basic biofuel-boasting license plate to a built-in flat screen DVD player.

Jalopnik is less than gushing: "We really don't know exactly what to make of this, as it seems to combine the most annoying aspects of hippie environmentalism and urban conspicuous consumption."

If you're up in the Bay area and want to learn about getting your muscle car running on biofuel, contact [David Dias](#) of the Hot Rod Biodiesel Club. I snagged his name off the bulletin board at the [Berkeley BioFuel Oasis](#).
